---

1. Introduction

DNA Marketing Engine is a custom CRM platform for DNA-ME CRM. It helps you with:

- **Contact Management** (Leads/Customers)
- **Deal Management** with Pipelines and Kanban
- **Communication** via Chats and Email
- **Automations** (Email sequences, notifications, Moco integration)
- **Email Marketing** with reusable sequences

This manual describes how to use the platform in your daily work and explains the available roles.

---

2. Roles in the CRM

The DNA ME CRM distinguishes between the following **roles**. They control who can see and do what (backend logic; the differentiation in the UI may be limited depending on the configuration).

Role	Title	Typical Tasks
admin	Administrator	Activate users, system settings, full access to all data (e.g., all chats, all email accounts). The first registered user automatically becomes an admin.

Role	Title	Typical Tasks
bdr	Business Development Representative	Process leads, initial contact, qualification. Often assigned a region (e.g., DACH, UK) and capacity (max. leads).
ae	Account Executive	Manage deals, negotiations, closing. Higher deal responsibility.
marketing_manager	Marketing Manager	Campaigns, lead generation, larger lead capacity, discovery/fallback.

Notes:

- **Registration:** The first user automatically becomes an **admin** and is immediately active. Subsequent users are created as **bdr** by default and are initially **inactive** until an admin activates them.
- **Chat Access:** Admins can see all conversations; other users typically only see conversations they are part of or that are assigned to their deal/lead.
- **Slack** is no longer supported and will be removed from the system; notifications are sent via email (e.g., to an admin/fadmin).

---

3. Overview: How to Use the Platform

Typical Workflow:

1. **Login** (possibly after registration and activation by an admin).
2. **Create Organizations** (companies), if you work with businesses.
3. **Create Leads/Customers** manually (or they are created automatically from incoming emails in the chat).
4. **Manage Leads** in the card view: contact details, notes, activities; the **Chat Button** opens the associated chats.
5. **Create Deals** and move them through stages in **Pipelines** (List or **Kanban View**).
6. **Use Automations** on the Deal Kanban: e.g., start an email sequence, send an email notification, create a Moco customer/project/proposal/invoice.
7. **Conduct Chats** under "Communication → Chat"; create a new conversation using the **Plus** button with lead assignment.
8. **Email Marketing**: Create sequences under "Email Marketing"; these sequences can be used in Kanban automations.

The **Tasks** feature is currently in development.

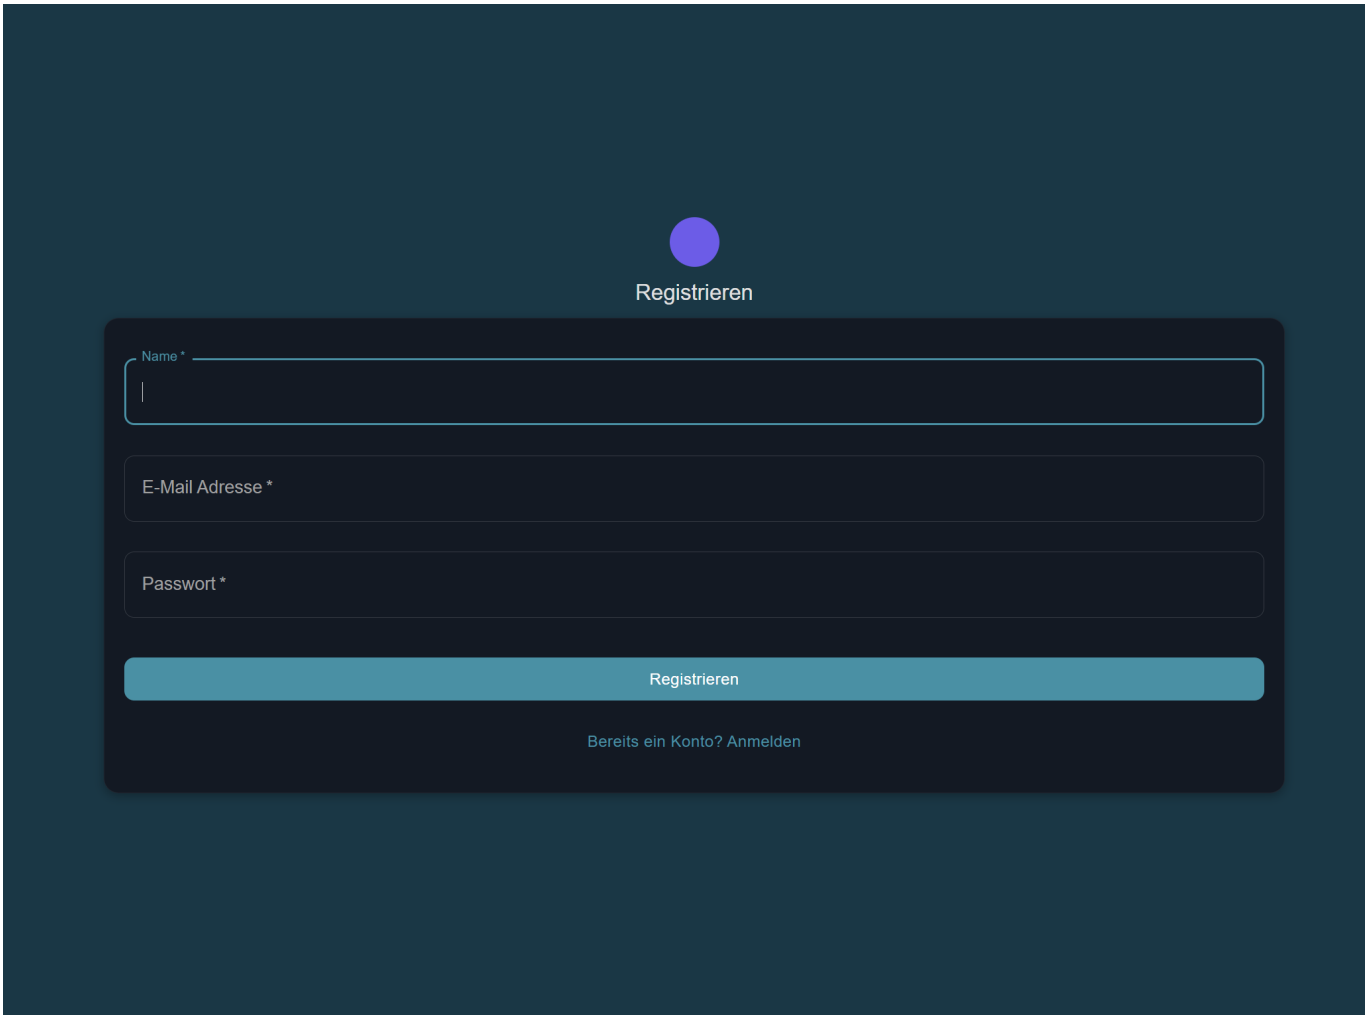
---

4. Registration and First Login

Registering a New User

1. Open the **registration page** in your browser (e.g., `https://crm.dna-me.net/#/register`).
2. Enter your **Name**, **Email**, and **Password**.
3. Click **"Register"**.

4. **First User:** Automatically becomes an **Admin** and can log in immediately.
5. **Other Users:** Receive a message that the registration was successful and an administrator needs to activate the account. After activation (by an admin in the backend/DB), the user can log in under **"Login"**.



Login

- Under **"Login"**, enter your email and password.
- If **2FA** is enabled: Enter the second factor (TOTP) after logging in. 2FA can be set up under **"2FA Setup"** (in the System menu).

---

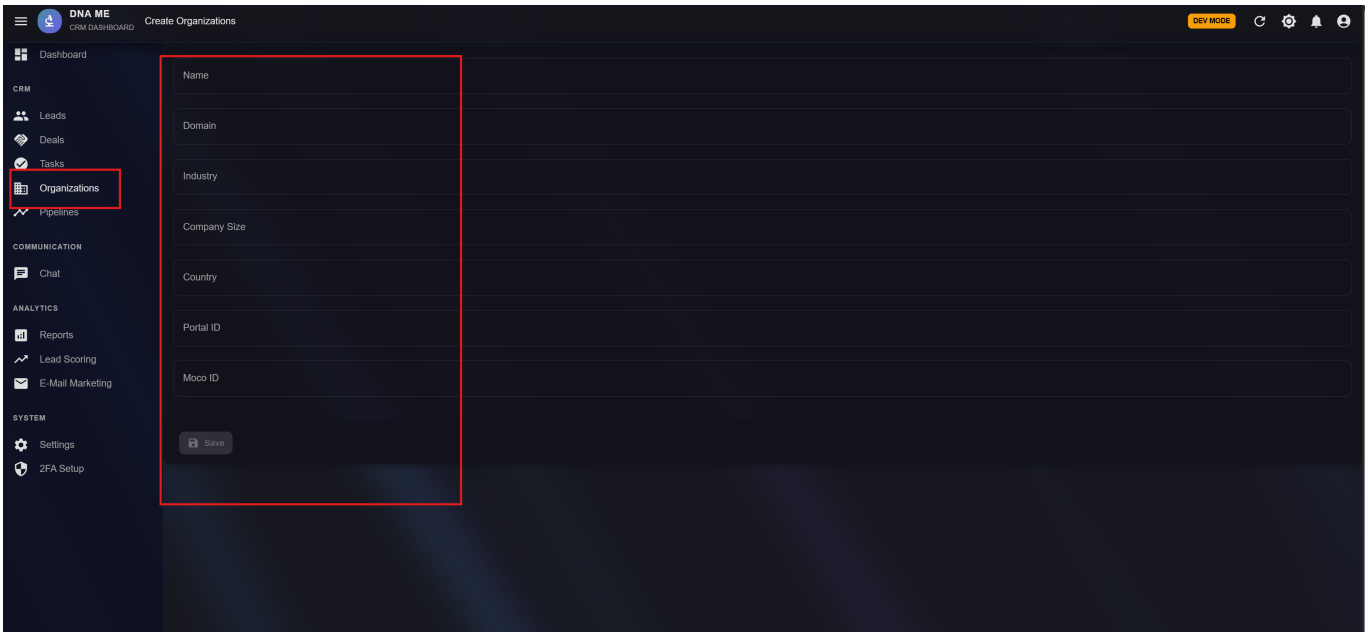
5. Creating Organizations

Organizations are **companies/firms** that you can later assign to leads.

1. Open **"Organizations"** from the menu.
2. Click **"Create"**.
3. Fill in the following fields (as available):
    - **Name**
    - **Domain**
    - **Industry**
    - **Company Size**
    - **Country**

    - **Portal ID** / **Moco ID** (optional, for integrations)
4. Save.

The created organization can be selected in the **"Company"** field (organization_id) when creating or editing a lead.



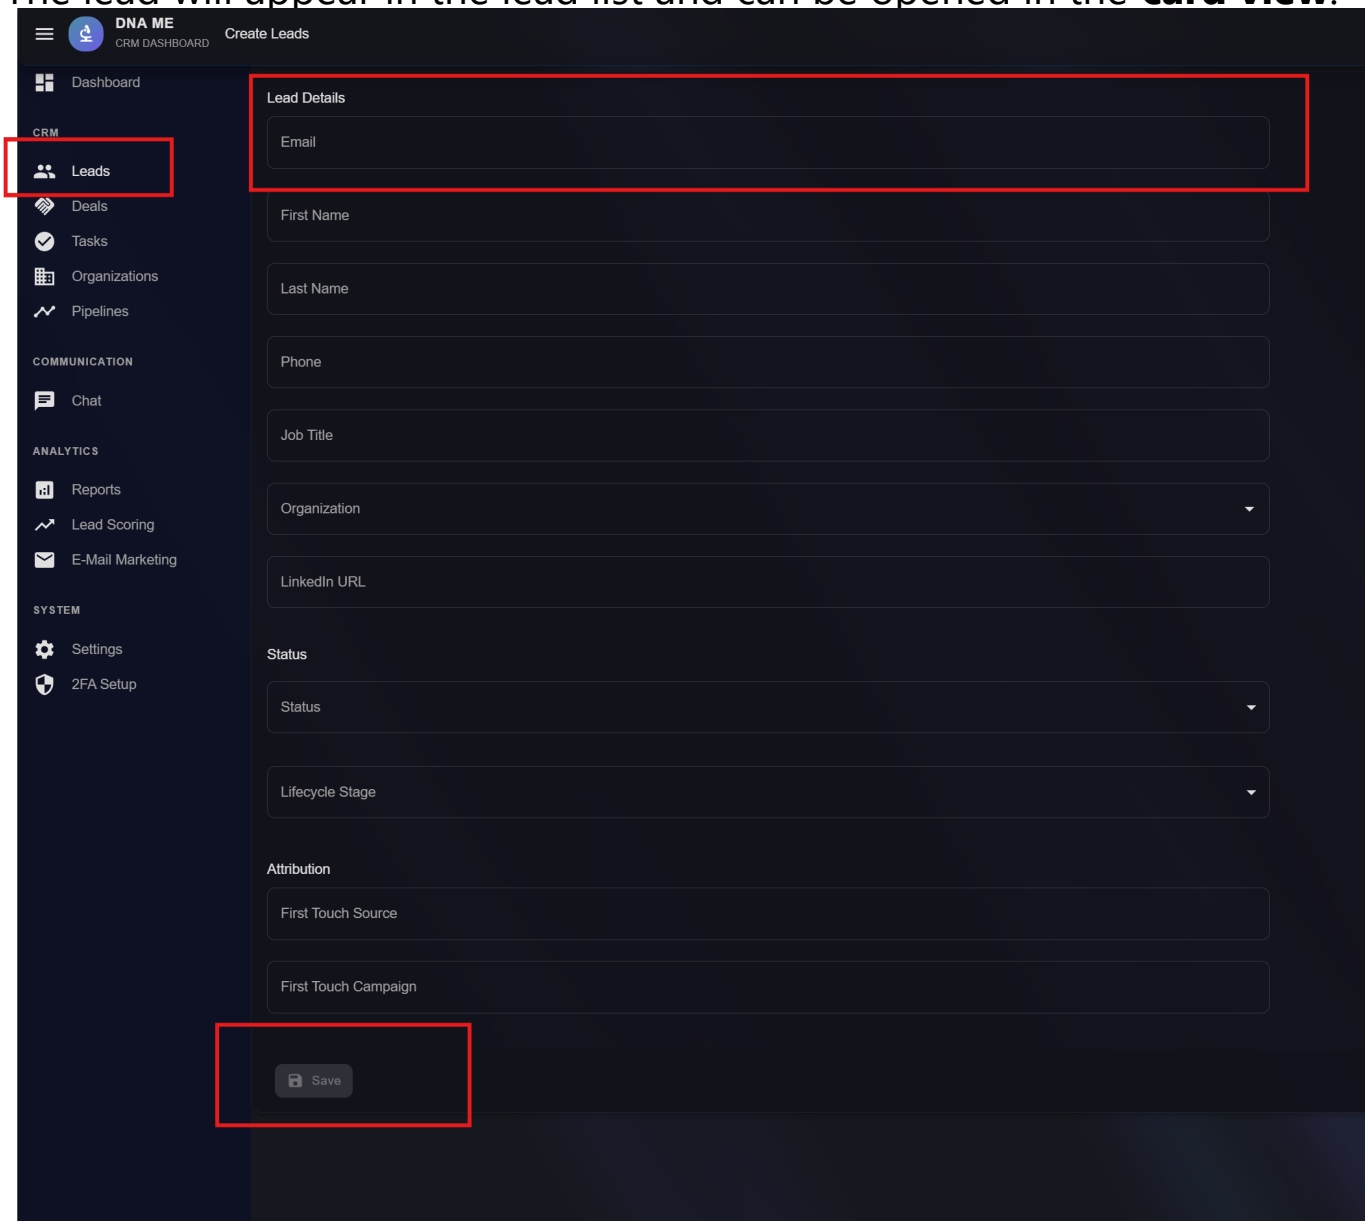
6. Creating Leads/Customers (Manually)

Leads are your **contacts/customers**. You can create them manually, or they can be created automatically when an unknown sender writes to you first (see Chats).

Manual Creation

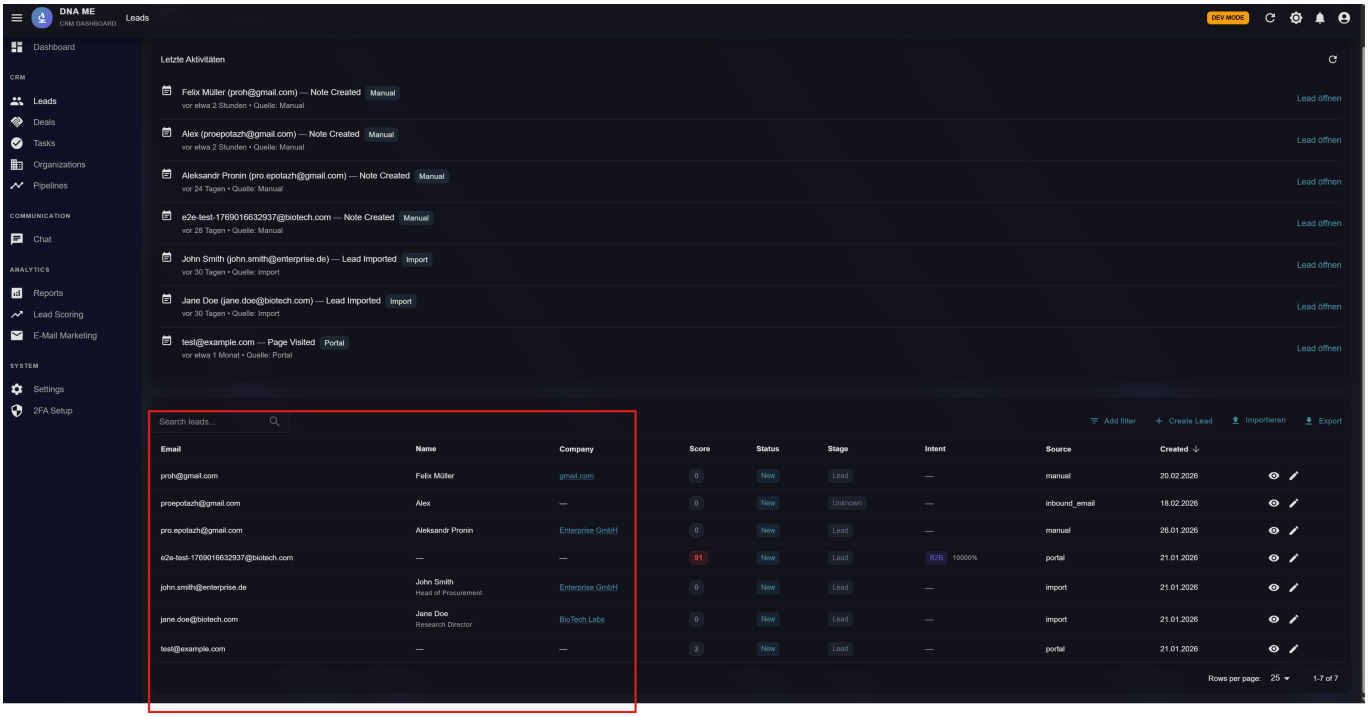
1. Open **"Leads"** from the menu.
2. Click **"Create"**.
3. **Required field: Email**.
4. Other fields as needed:
    - **First Name**, **Last Name**, **Phone**, **Job Title**
    - **Company** (select an organization, if available)
    - **LinkedIn URL**
    - **Status** (e.g., New, Contacted, Qualified, Nurturing, Customer, Churned)
    - **Lifecycle Stage** (Lead, MQL, SQL, Opportunity, Customer)
5. Save.

The lead will appear in the lead list and can be opened in the **card view**.



7. Lead/Customer Card View

When you click on a lead in the list, the **detail view (card)** for that lead opens.



Key Elements

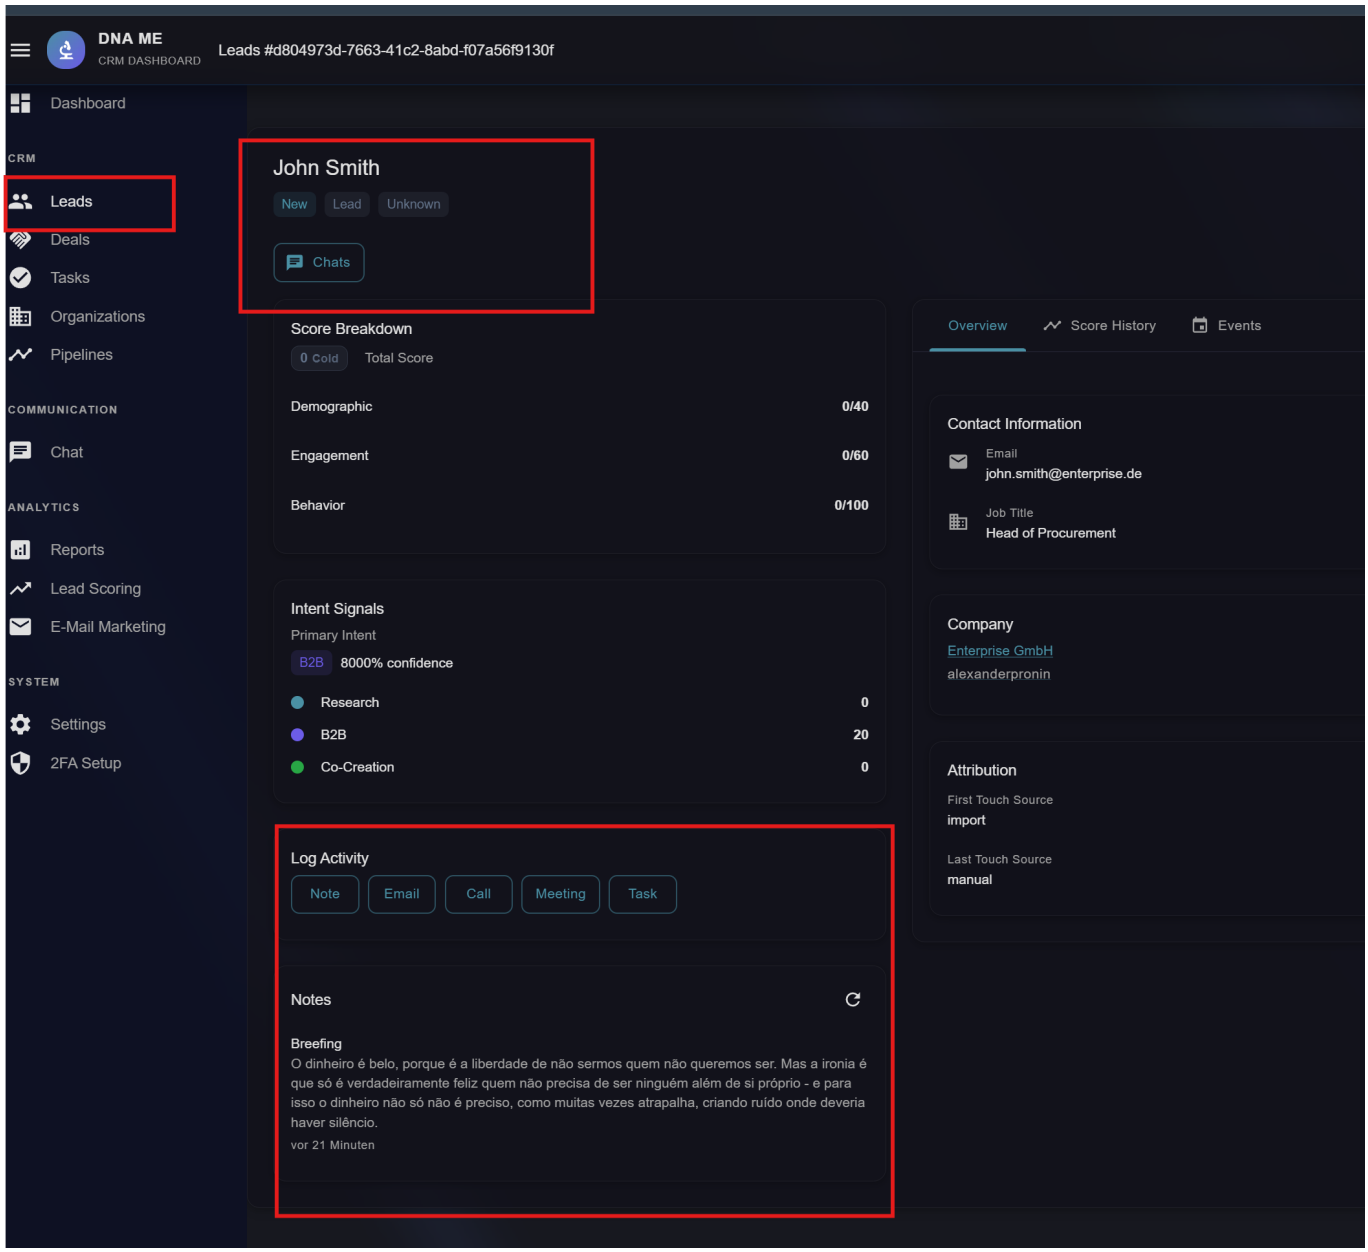
- **Header:** Name, Status, Lifecycle, possibly routing status.
- **Score Breakdown** and **Intent Signals** (if scoring is active).
- **Contact Information:** Email, Phone, Job Title, LinkedIn.
- **Company:** Linked organization (if set).
- **Log Activity:** Record activities (Note, Email, Call, Meeting, Task).

"Chats" Button

- At the top of the card, there is a **"Chats"** button.
- Clicking it opens a **chat panel** with all **relevant chats** for this lead (from the Communication section).
- There, you can view and continue conversations with the customer.

Notes – at the bottom of the card

- At the **bottom** of the lead card is the **"Notes"** section.
- It displays **sorted entries** for the lead: manually created notes (activity type "Note"), sorted by time (newest first).
- You can add more notes (or emails, calls, meetings, tasks) via **"Log Activity"**; notes will then appear in this list.
- A **refresh button** reloads the notes.



---

8. Tasks (In Development)

The **"Tasks"** menu item is available and shows a task list (CRUD via API). The **full functionality and UX** (e.g., assignment to deals/leads, filters, due dates) is still **in development**. Tasks can already be created as an activity in the lead card via "Log Activity".

---

9. Pipelines

Pipelines define the **sales stages** and metrics for your deals.

What You See There

- **Pipelines List:** All pipelines with an overview (e.g., number of deals, revenue, win/loss).
- **Pipeline Detail:** Clicking on a pipeline opens the **detail view** with:
  - **Stages** with deal counts and values
  - **Metrics** (e.g., total revenue, won/lost deals, conversion rate)

    - **Settings link** to pipeline configuration (if configured)

Usage

- Pipelines are the **template** for deal phases. When creating a deal, you select a pipeline and stage. On the **Deal Kanban**, deals are grouped by stage; you can drag and drop deals between stages.

---

10. Chats & Communication

The **chat overview** is located under **"Communication → Chat"**.

Layout

- **Left side:** List of conversations with **tabs**:
    - **All:** all conversations
    - **Direct:** direct conversations (type = direct)
    - **Internal:** internal conversations (type = internal)
    - **Group:** group conversations (type = group)
- **Right side:** The selected **chat** (history and input field).
- **Search** and **Refresh** in the sidebar.
- **Plus button (+):** Create a new conversation.

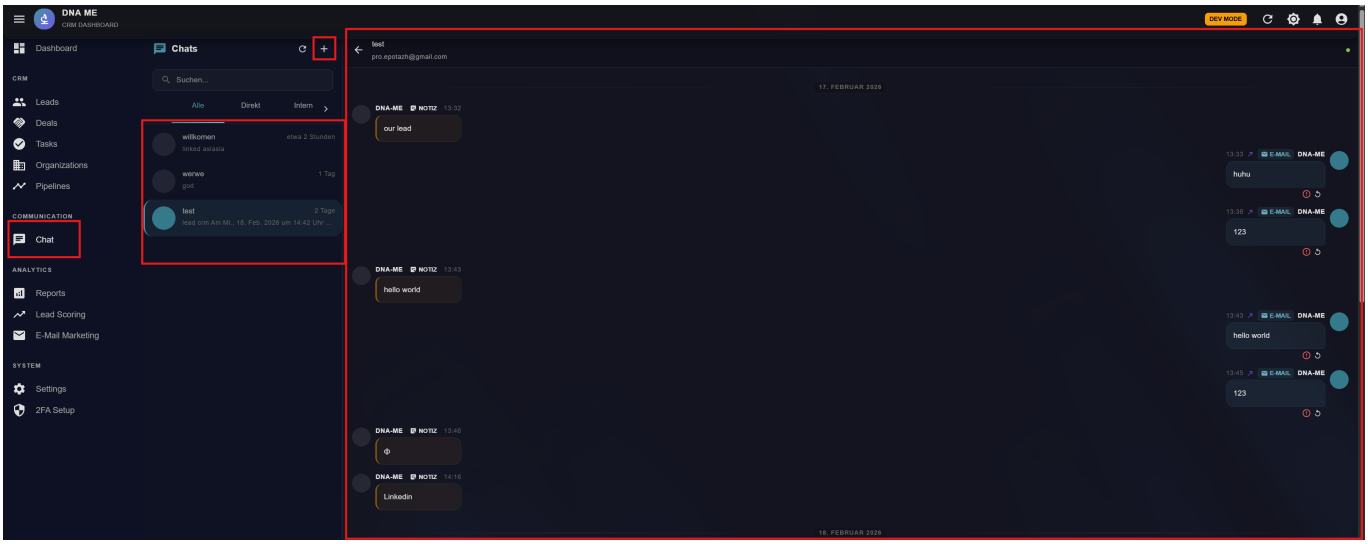
Every Chat = Communication with a Lead

- Every conversation is assigned to a **lead** (or will be).
- **New email from a customer:** If the customer writes **first** and is **not yet in the database**, a **lead card (customer)** can be created automatically; the message appears in the chats.
- In the lead card, the **"Chats"** button opens exactly the chats belonging to this lead.

Creating a New Conversation

1. Click the **Plus button (+)**.
2. Select a **Lead** (search by name or email; min. 2 characters).
3. Optionally enter a **Subject**.
4. Choose a **Type**: Direct, Internal, or Group.
5. Click **"Create"**.

The new conversation appears in the list; you can start writing messages immediately.



11. Deals: List and Kanban View

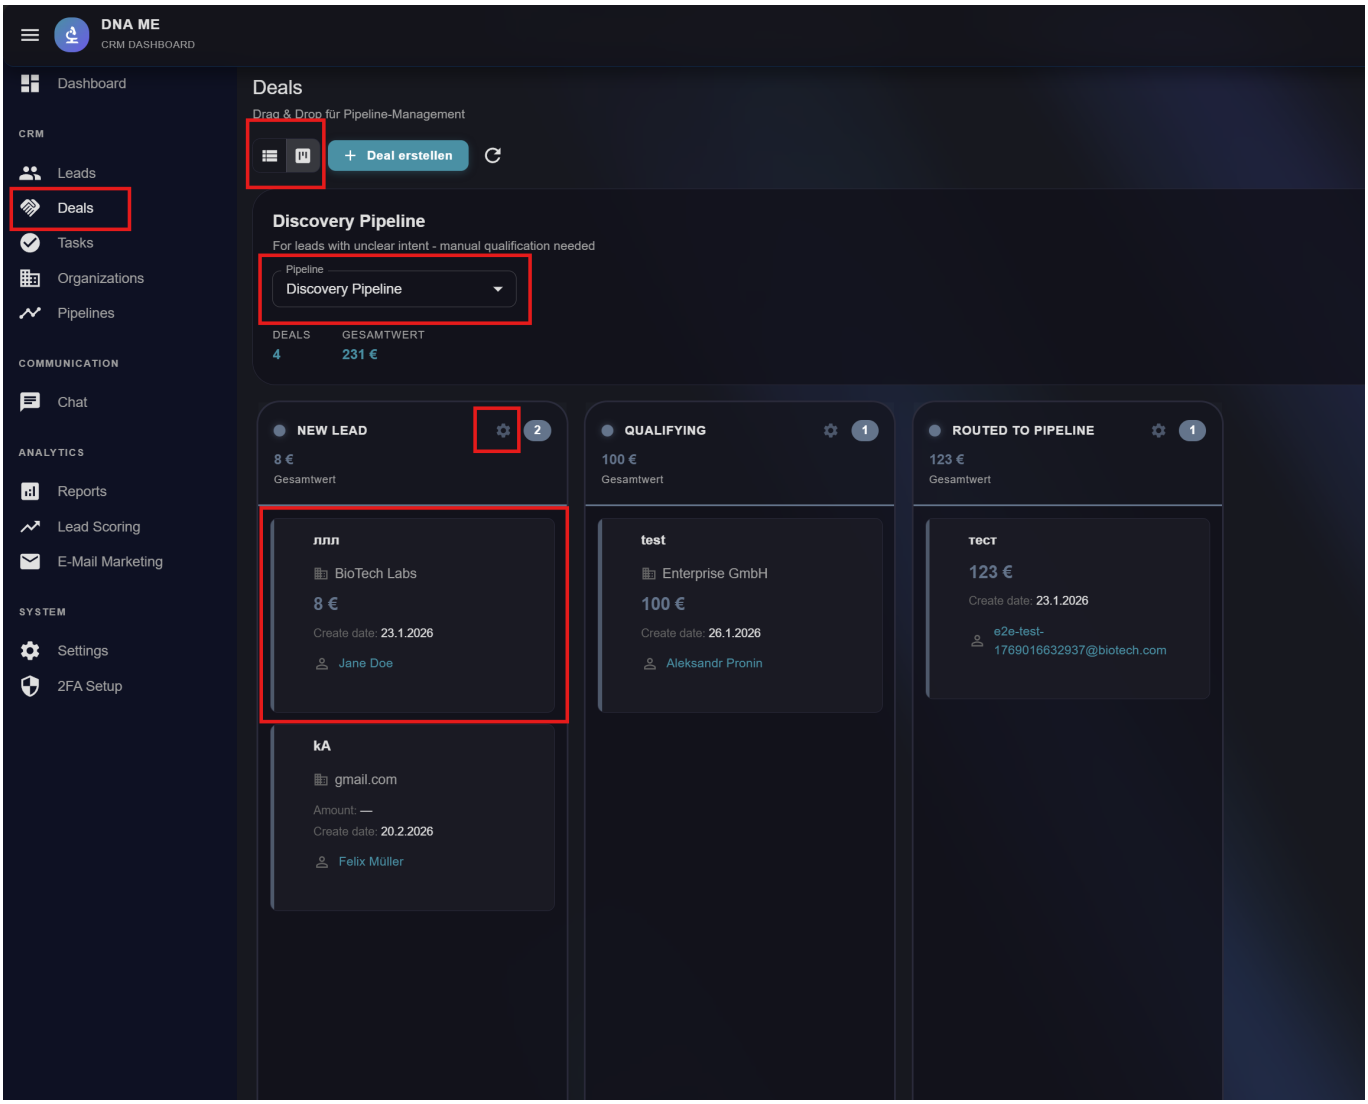
You can manage deals under **"Deals"**. There are **two views**.

List View

- **Table** of deals: Name, Pipeline, Stage, Value, Due Date, possibly email sequence status, etc.
- Search and filters (e.g., by pipeline/stage).
- **Create:** Create a new deal.

Kanban View

- The **toggle** in the toolbar (list icon / Kanban icon) switches to the **Kanban board view**.
- Columns = **Stages** of the selected pipeline.
- **Cards** = Deals; you can **drag and drop** deals to another stage.
- Moving deals can trigger **automations** (see next section).



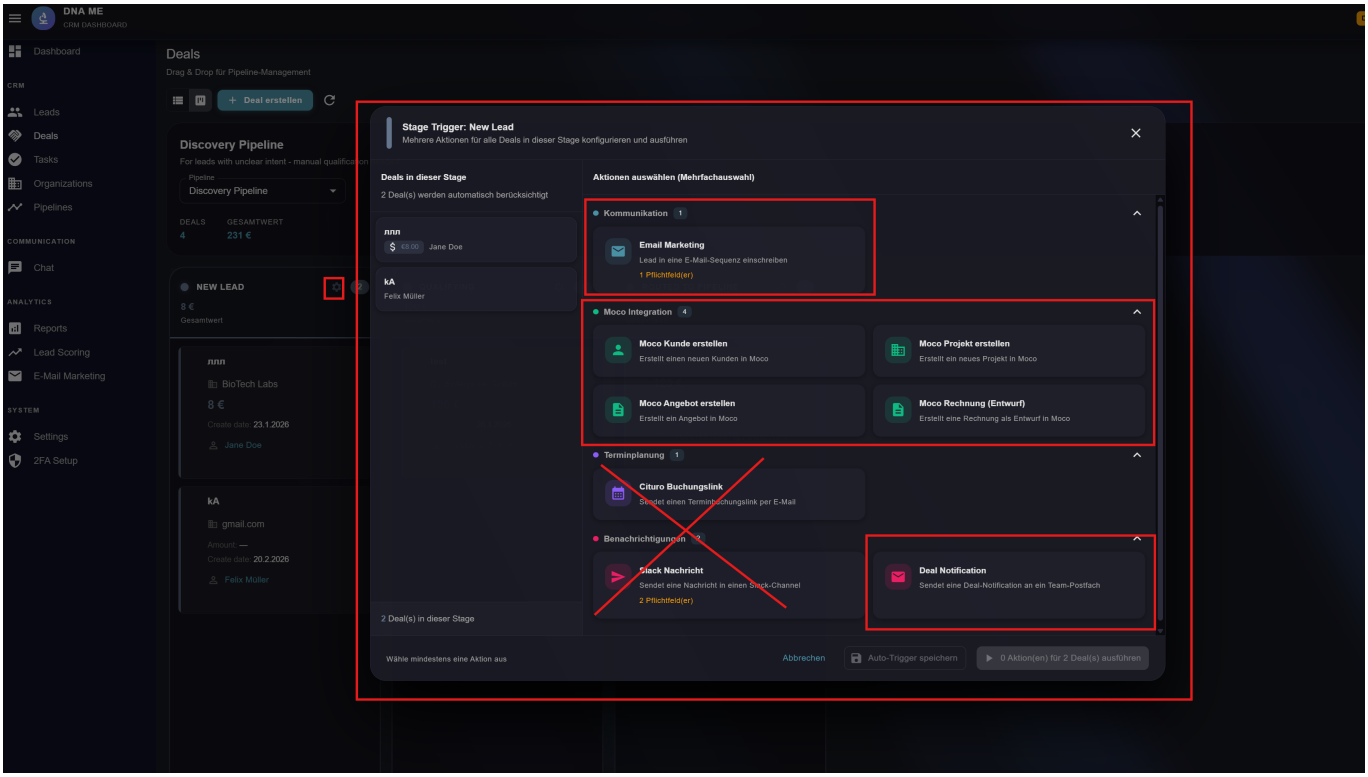
12. Automations on the Deal Kanban

On the **Kanban board**, **automations (triggers)** can be configured for each **stage**. When a deal is moved into a stage, the configured actions are executed.

Available Automations (Selection)

Action	Short Description
Email Marketing	Enroll a deal in an **email sequence**. The sequence is created under "Email Marketing" and selected here.
Notification (Email)	Currently: **Email notification** to a permanently configured recipient (e.g., fadmin/Admin). No more Slack.
Create Moco Customer	Creates a customer in **Moco**.
Create Moco Project	Creates a project in Moco.
Create Moco Proposal	Creates a proposal in Moco.
Moco Invoice (Draft)	Creates a draft invoice in Moco (optionally with title, tax, due date, line items).

Action	Short Description
Cituro Booking Link (in development)	Sends a meeting booking link via email.



Note: Slack is no longer supported and will be removed from the system. Notifications are sent via email (e.g., to Admin/fadmin).

Usage

- When **editing a stage** or via the Kanban trigger configuration (e.g., gear icon/"Stage Triggers"), you can select the desired actions and set parameters (e.g., which email sequence, which email address for notifications).
- When **moving** a deal into this stage, the actions run automatically (e.g., email to fadmin, enrollment in a sequence, Moco customer/project/proposal/invoice).

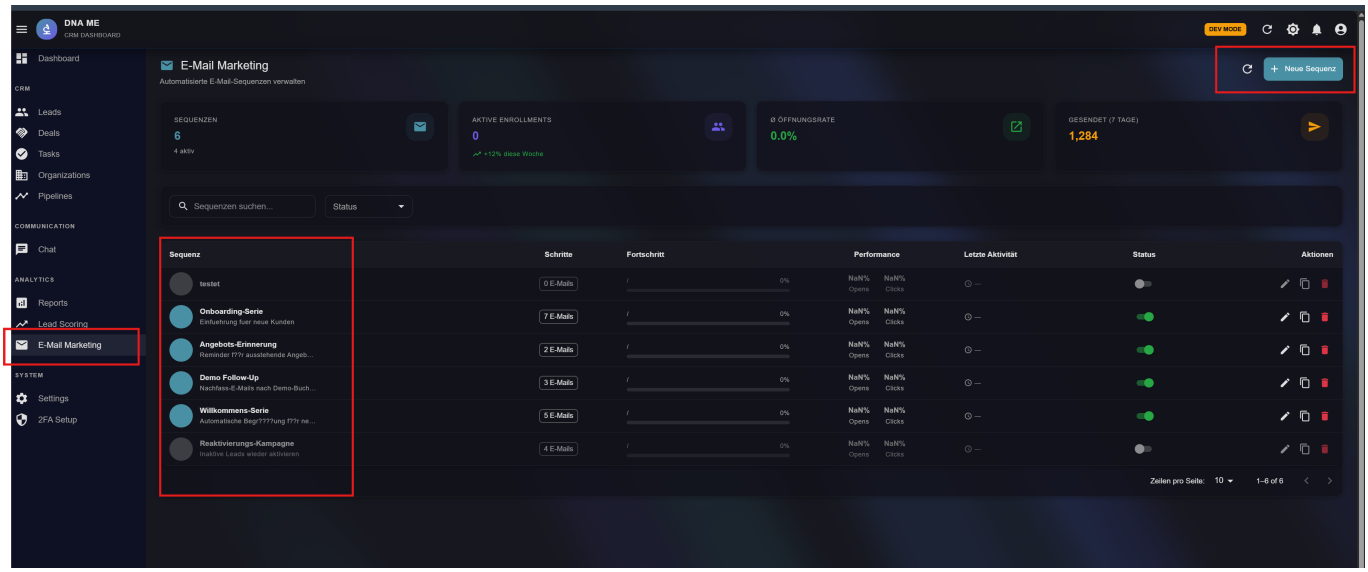
---

13. Email Marketing (Sequences)

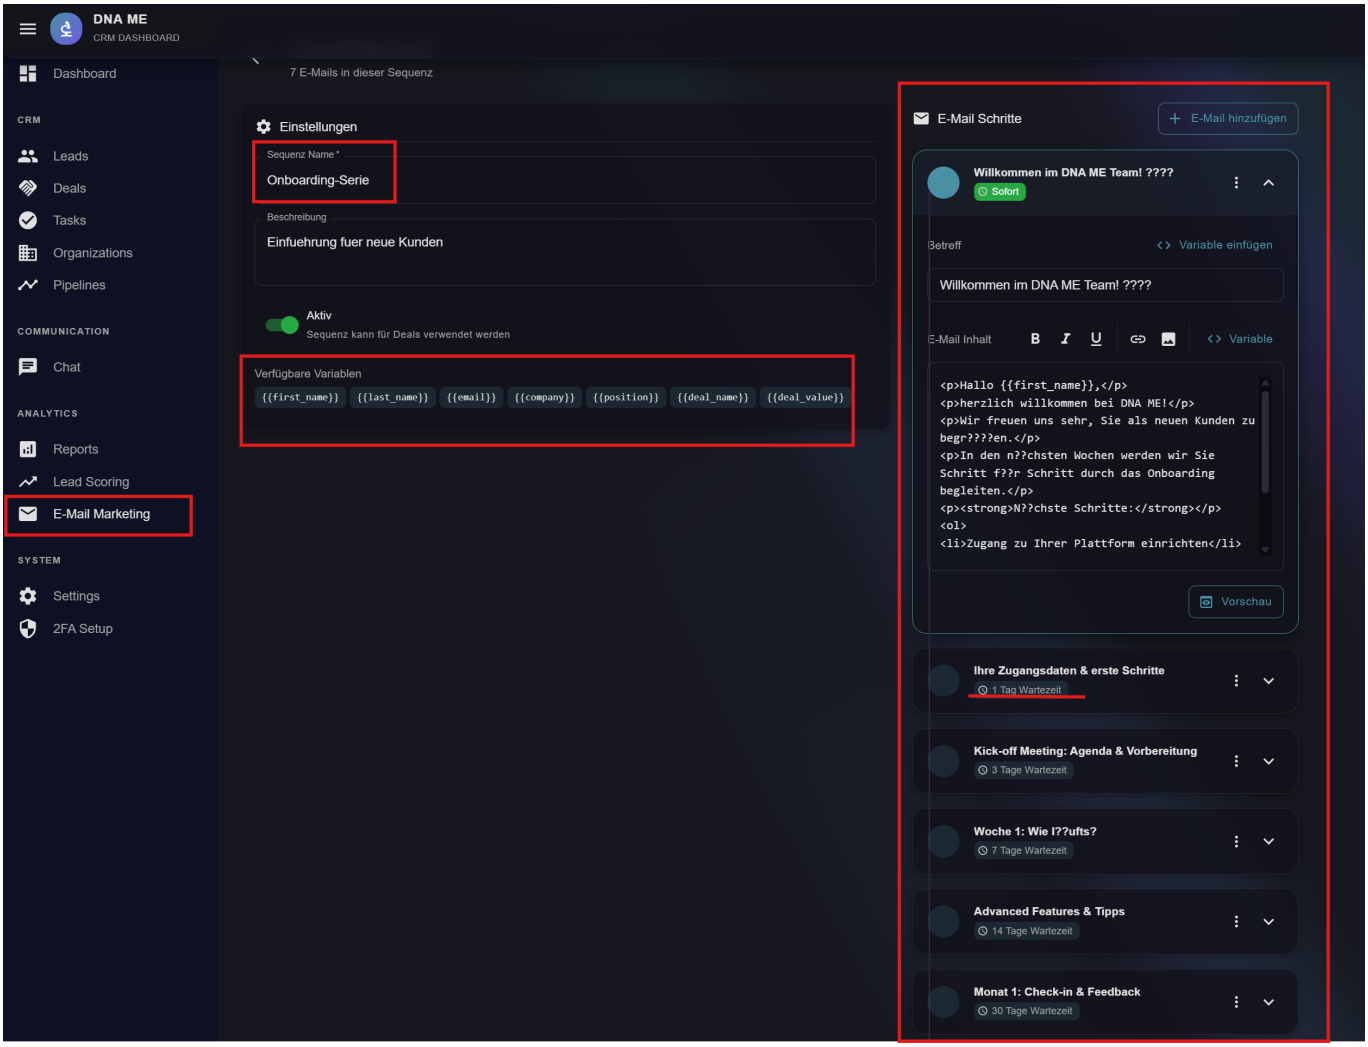
Under **"Email Marketing"** (in the Analytics menu), you manage **email sequences** (chains of emails).

What You Can Do There

- **Create and edit sequences** (name, description, steps, triggers).
- **Open the Sequence Builder** (e.g., via Edit or a direct route): define the steps of the sequence (subject, content, delay, etc.).
- **Activate/deactivate** sequences.
- Sequences typically have a **number of steps** and optional **triggers** (e.g., manual, on deal stage change).



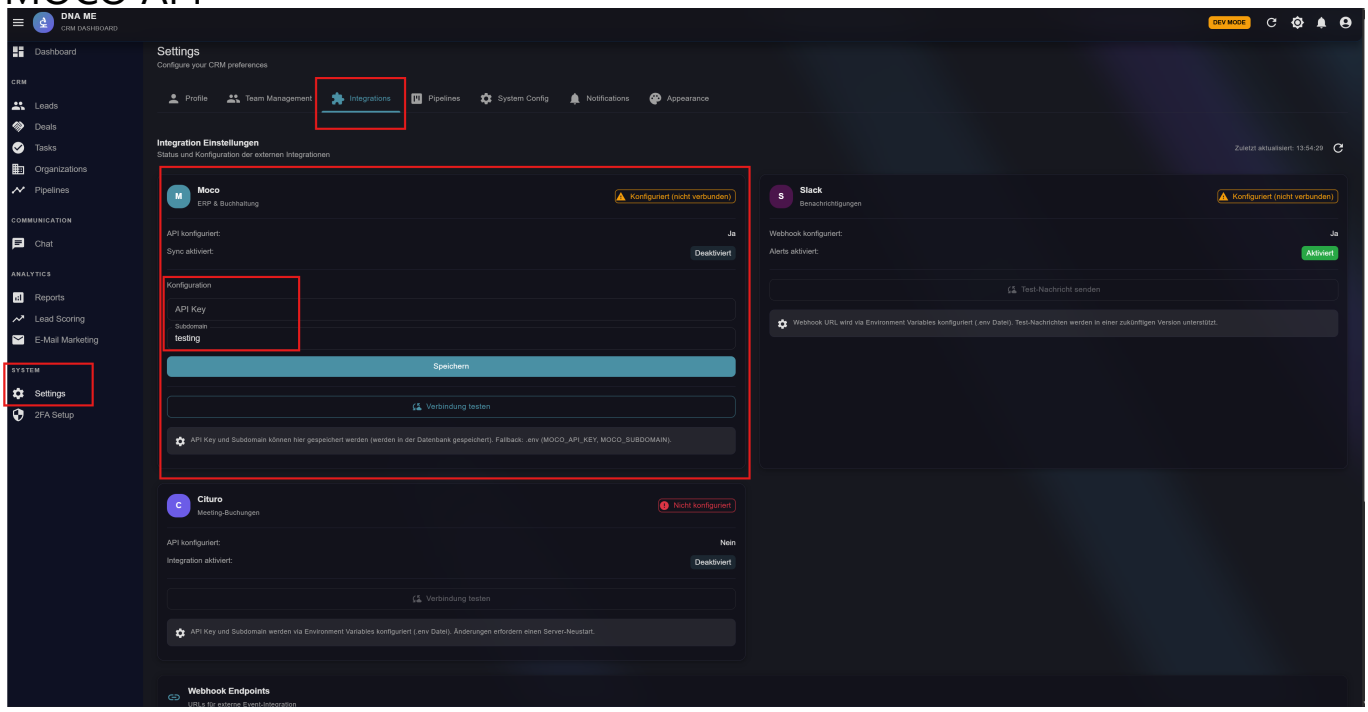
An onboarding example



Link to the Kanban

- The **sequences** created here can be selected in the **Deal Kanban automations** under **"Email Marketing"**.
- When a deal is moved to a stage for which "Enroll in email sequence" is configured, the deal is enrolled in the selected sequence and automatically receives the emails in the chain.

14. Notes on Integrations

- **Moco:** For proposals, invoices, customers, and projects. Configuration, e.g., under Settings → Integrations (API key, subdomain). The automations on the Kanban use this connection.
- **Slack:** Is **no longer used** and will be removed from the system. Notifications are sent via email (e.g., to fadmin/Admin).
- **Email Dispatch:** Email sequences and notifications use the configured email services (e.g., SMTP). Email accounts per user can be managed under settings (IMAP/SMTP for incoming/outgoing mail).


MOCO API
